

AMENDMENTS TO THE SPECIFICATION:

Page 12, last paragraph through Page 13, line 6, please amend this paragraph as follows:

[0046] The magnetic unit is composed of a first magnetic element 1 and a second magnetic element 2. The first and second magnetic elements 1 and 2 are of the same pole and repulsive to each other. The first magnetic element 1 is ring-shaped with its center hole telescopically fitted to the rotation shaft 42. The second magnetic element 2 is secured to the bearing seat 21 and is located below the first magnetic element [[1]] 51, and it has a center hole with a diameter larger than that of the rotation shaft 42, to an extent that when the rotation shaft 42 passes through the second magnetic element [[2]] 52, both of them do not come into contact with each other. As shown in Figures 3-8, the bearing 50 is a self-lubricating bearing.
